

## Practical No 7

A. Create a web application for to display the phone no of an author using database.

## Web.config

```
<connectionStrings>
  <add name="C1" connectionString=" " />
</connectionStrings>
```

## WebForm1.aspx

[illegible]

## WebForm1.aspx.cs

```
using System.Data;
using System.Web.Configuration;
using System.Data.SqlClient;

protected void Page_Load(object sender, EventArgs e)
{
    if (IsPostBack == false)
    {
        string connStr =
ConfigurationManager.ConnectionStrings["C1"].ConnectionString;
        SqlConnection con = new SqlConnection(connStr);
        con.Open();
        SqlCommand cmd = new SqlCommand("select * from authors", con);
        cmd.CommandType = CommandType.Text;
        SqlDataReader dr = cmd.ExecuteReader();
        DropDownList1.DataSource = dr;
        DropDownList1.DataTextField = "Auname";
        DropDownList1.DataValueField = "phoneno";
        DropDownList1.DataBind();
        con.Close();
    }
}
```

```
}  
  
protected void Button1_Click(object sender, EventArgs e)  
{  
    Label1.Text = DropDownList1.SelectedValue;  
}
```
