

Practical No 6

- A. Create a web application bind data in a multiline textbox by querying in another textbox.

Web.config

```
<connectionStrings>
  <add name="C1" connectionString=" " />
</connectionStrings>
```

WebForm1.aspx

```
<asp:TextBox ID="TextBox1" runat="server" TextMode="Multiline"></asp:TextBox>
  <br />
  <br />
  <asp:Button ID="Button1" runat="server" OnClick="Button1_Click" Text="Show Data" />
  <br />
  <br />
  <asp:ListBox ID="ListBox1" runat="server" Height="188px" Width="300px"></asp:ListBox>
```

WebForm1.aspx.cs

```
using System.Data;
using System.Data.SqlClient;
using System.Configuration;

protected void Button1_Click(object sender, EventArgs e)
{
    string connStr = ConfigurationManager.ConnectionStrings["C1"].ConnectionString;
    SqlConnection con = new SqlConnection(connStr);
    con.Open();
    SqlCommand cmd = new SqlCommand(TextBox1.Text, con);
    SqlDataReader dr = cmd.ExecuteReader();
    ListBox1.Items.Clear();
    while (dr.Read())
    {
        for (int i = 0; i < dr.FieldCount; i++)
        {
            ListBox1.Items.Add(dr[i].ToString());
        }
    }
    dr.Close();
    con.Close();
}
```
